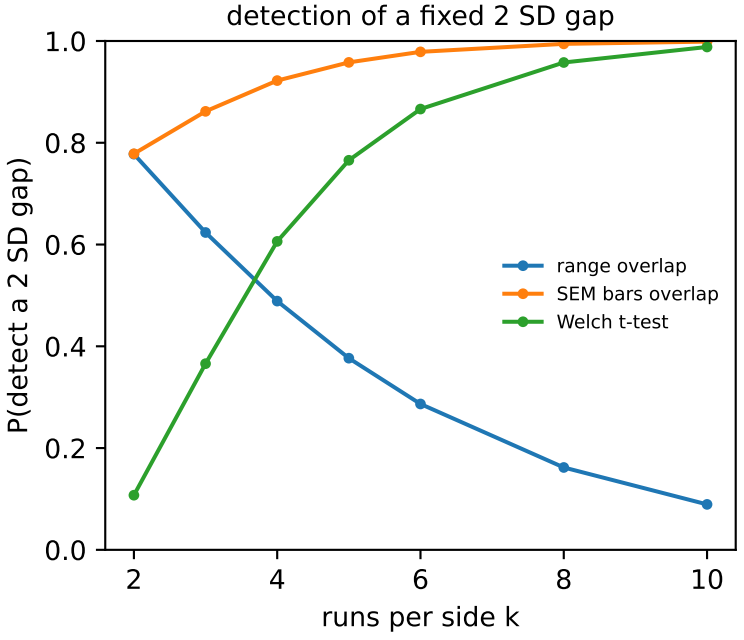
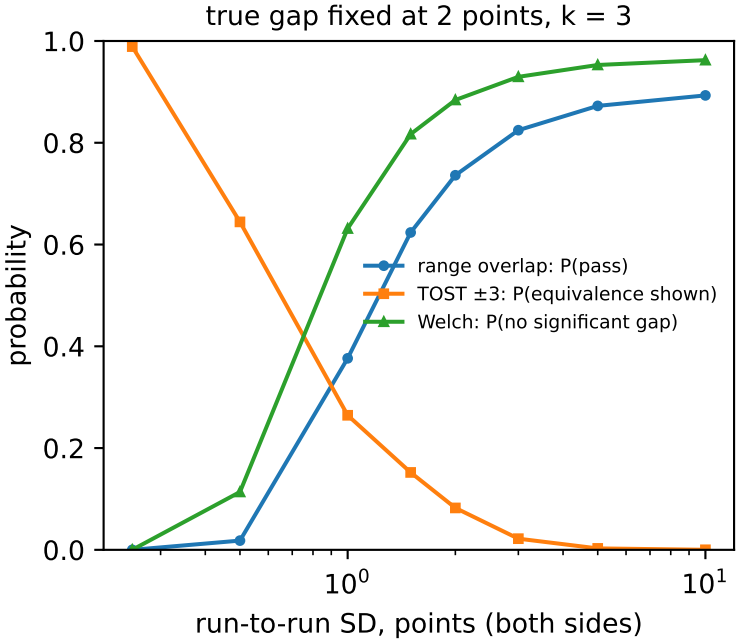
k = 3 runs per side, normal noise
P(verdict = mismatch)
true gap, in run-to-run SDs
range overlap (Harbor)
mean ± SEM bars overlap
|gap| ≤ SE of difference
Welch t-test, p < .05



detection of a fixed 2 SD gap
P(detect a 2 SD gap)
runs per side k
range overlap
SEM bars overlap
Welch t-test



true gap fixed at 2 points, k = 3
probability
run-to-run SD, points (both sides)
range overlap: P(pass)
TOST ±3: P(equivalence shown)
Welch: P(no significant gap)
